Web Developer

TECHNICAL PROFICIENCIES

- HTML
 - CSS
 - Sass
 - Tailwind
 - JavaScript
 - TypeScript
 - React
 - Next.js
 - Redux
 - Git
-

PROJECTS

[Portfolio](#)

- A portfolio website showcasing all other projects.
- This was the first time I used CSS preprocessors, but I successfully implemented Sass and created complex animations and transitions for this app.

[Coffee Time](#)

- An e-commerce website for a coffee shop. In addition to login, add to cart, and purchase functionality, there is an admin page for adding and deleting shop items, reading customer feedback, and viewing detailed reports about customers and their purchases.
- While working on this app, I was challenged to implement Firebase Firestore as well as Storage to deliver functionalities not included in Firestore itself. I managed to solve those issues and develop a working solution.

[Mindboard](#)

- A forum application where, after registration, users can post messages, comment on other posts, and enter the dashboard page to view their actions. I included dark and light mode options and a two-language interface.
- This was the first app I built using Firebase Firestore for the backend, but I developed a fully functional forum application in under a month.

[TV Show Guide App](#)

- An app that lets you keep track of your favorite TV shows. The list of TV shows can be filtered by type, genre, or country, and a search by name is also available.
- This is my second project built with React. I made more complex app with multiple api calls and a big database to work with.

[Recipes App](#)

- An app that helps you find your favorite recipes. You can search by name and add recipes to your favorites.
- Through building this project, I learned React and developed a strong understanding of responsive design, which I have since applied to all of my other projects.

[Easy QR Generator](#)

- An application that generates a QR code from a URL address, which you can save as a PNG.
 - I wanted to build a simple app, which I could finish in a couple of days, but useful and good looking. I managed to finish it on time and many of my friends still use it.
-

LICENSES & CERTIFICATIONS

freeCodeCamp: Responsive Web Design 2021 | freeCodeCamp: JavaScript Algorithms and Data Structures 2022 |

EF SET English Certificate 78/100 (C2 Proficient) 2022

EDUCATION

Master's degree in Law. Peoples' friendship University of Russia.
